

export-client

A thin client library for submitting export jobs and polling for completion. See the design doc for the full rationale.

Usage

```
client.submit_export(account_id, filters)
```

REQ-1: must not block on submit; return a job id immediately.

REQ-2: must raise a typed error on a failed job, not a generic timeout.

TODO: add a `wait()` convenience helper for scripts that want to block anyway.
